DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments see Remarks, filed 11/03/04, with respect to claims 1-35 have been fully considered. The rejection/objection of claims 1-26, 28-30, 32 and 34-35 has been withdrawn.
- 2. Applicant's arguments filed 11/03/04 with respect to claims 27, 31, 33 have been fully considered but they are not persuasive.

Applicant argues that prior art fails to suggest "information processing apparatus that includes a parameter conversion section for determining a first parameter and a parameter integration section for integrating the first parameter and for assigning a second parameter, the second parameter being a result of integration of the first parameter, as recited in independent claim 1 and similarly recited in independent claims 27-35." However, said limitation is only in claims 1 and 28, therefore, as result the Examiner holds the rejection as applied to claims 27.

Applicant also argues that prior art fails to disclose or suggest a reliability storage section- that stores a degree of reliability of a parameter assigned to respective pixels, as recited in the claims (29 and 31-34). However, said limitation is not recited in claims 27, 31 and 33. Therefore, as result the Examiner holds the rejection as applied to claims 27, 31 and 33.
